Add Role and Specialty

Introduction:
To ensure your correct role is displayed, the following instructions need to be carried out once you have claimed your HealthTap account.

Note: This is a workaround until such time that roles and specialties are correctly documented within the system. You will be notified when this is implemented.

Adding a Role and Specialty

- Log into your HealthTap account using your Waikato DHB email address and designated password.
- Click on the Enhance profile > link.
- Scroll down to the Education & Training area.
- From the drop-down field ensure the first specialty selected is your role, i.e. Registered Nurse.

Further specialty/specialties can be added by clicking on the ADD SPECIALTY/PRACTICE button.

Further information about your specialty and expertise of care can be documented within the Tell about you area to assist patients to understand who you are.
